13. **Postural stability**
(Respons to sudden posterior displacement produced by pull on shoulders while patient is erect, with eyes open and feet slightly apart; patient is prepared)

0 = Normal
1 = Retropulsion, but recovers unaided
2 = Absence of postural response; would fall if not caught by examiner
3 = Very unstable; tends to lose balance spontaneously
4 = Unable to stand without assistance

14. **Body bradykinesia and hypokinesia**
(Combining slowness, hesitancy, decreased arm swing, small amplitude, and poverty of movement in general)

0 = None
1 = Minimal slowness, giving movement a deliberate character, could be normal for some persons; possibly reduced amplitude
2 = Mild degree of slowness and poverty of movement that is definitely abnormal; alternatively, some reduced amplitude
3 = Moderate slowness; poverty or small amplitude of movement
4 = Marked slowness; poverty or small amplitude of movement
